

3-1 Name and Shape

All-in-one airbag/harness type
(with a fixed Hit-Air system)

Key ball to be pulled out to release the gas into the airbag instantly.

Front / before

Model : SV-2

Front / after

*Design and shape of model may vary.

CAUTION ▲ Made of such non-slippery materials as rubber or silicon to avoid abrasion of the part where the wire is tied.

Protective tube

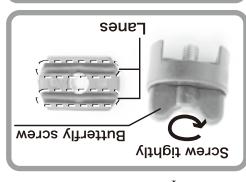

CAUTION ▲ Place the coiled wire between the loop of the stirrup's grommets and tighten the butterfly screw firmly. Leave about 2 cm (0.8 inch) of the wire out of the stirrup's grommets, and tighten the butterfly screw firmly. Otherwise, a wire may come off the loop setter and the airbag will not be activated.

Protective tube

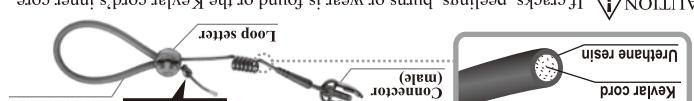

CAUTION ▲ When you get on the horse, be sure that the butterfly screw has been screwed tightly. The Loop Setter is used to secure the coiled wire after its length is adjusted.

Loop setter

CAUTION ▲ If cracks, peeling, burns or wear is found on the Kevlar cord's inner core becomes visible, replace it immediately. Otherwise, it may break or come off the loop setter. Each user must take responsibility for maintenance and replacement of the coiled wire.

Loop setter

CAUTION ▲ Is constructed with a strong wire made of Kevlar cord coated with urethane resin.

Coiled Wire

○ Before getting off the horse, press the press button of the "one-touch release" for disconnection (Photo 2).

5-2 Connecting Coiled Wire and Hit-Air

2. How to fix a coiled wire/bungee lanyard to the saddle strap.

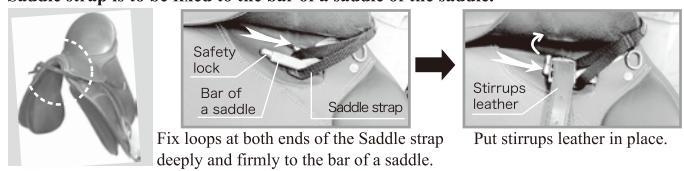

Fix the coiled wire/bungee lanyard to the center loop of the saddle strap.

How to fix to the Saddle Strap.

Saddle strap is to be fixed to the bar of a saddle of the horse.

CAUTION ▲ 1. If the "coiled wire/bungee lanyard" is not attached to the saddle strap properly, it may come off when it is stretched then the Hit Air will not be activated.

CAUTION ▲ 2. Replace the "coiled wire/bungee lanyard" when wear, burns, peeling or cracks are found.
*Do not use the coiled wire/bungee lanyard other than the one supplied by an authorized dealer.

CAUTION ▲ 3. Don't use a frayed and deteriorated saddle strap. Replace it immediately, otherwise it may be worn out and the system may not be activated.

CAUTION ▲ 4. The saddle strap connected to the bar of a saddle may come off at the activation and the airbag may not inflate

○ The Hit-Air is designed to act as a shock absorber and also break depending on the shape of the object which it strikes and also the extent of impact given.

4. The CO₂ gas is sent from the key box to each air cushion (urethane film) through air tube.

3. The strength against breakage depends on the material of the jacket the material of the inner tube (urethane) and the strength of the stick it also depends on the degree of impact.

2. The maximum pressure is about 20 kPa (0.2 kg/cm²) when the air cushion is fully inflated, but gradually decreases as gas comes out of the air cushion.

1. The air cushions are made of high quality strong urethane film to absorb and reduce the shock of impact as much as possible when they are inflated.

CAUTION ▲ 5. Whenever the Hit-Air is inflated, even if there is no visible damage, we recommend taking care of the Hit-Air to an authorized dealer for a maintenance check (*3).

6. The Hit-Air may not function properly, if there is damage to the Hit-Air, replace the amount of the pressure given to the full, the gas will leak out gradually. Depending on the case of an accident.

4. The Hit-Air may not function properly, if there is damage to the Hit-Air, replace the amount of the pressure given to the full, the gas will leak out gradually. Depending on the case of an accident.

3. After the airbag is inflated in full, the gas will leak out gradually. Depending on the case of an accident.

2. At the back of CO₂ cartridge and the key box, a key box plate (made of plastics) or a buffer material is placed to protect the rider's chest from the projecting objects in case of an accident.

1. As soon as the "activation distance" is reached, the Hit-Air is activated and the CO₂ gas is sent into the air cushion so that it will provide protection from the shock of impact even before it is fully inflated.
