

4-4 Key Ball (Y-type)

The key ball holds a compression spring and an interlocking needle in the key box.

When the system is activated, the key ball comes out of the key box and a needle in the key box is released and punctures the seal of the gas cartridge to inflate the Hit-Air immediately.

The key ball and the key ring are integrated parts.

4-5 Hit-Air structure

Hit-Air of urethane film is attached directly to the inside of the cover inflates and absorbs the shock of impact.

*Design and shape of model may vary.

4-6 CO₂ Gas Cartridge

- The gas cartridge contains CO₂ gas.
- When the “key ball” is released from the “key box”, a needle punctures the seal of the gas cartridge to let the gas go into each air cushion.
- Screw the CO₂ cartridge fully into the bottom until it cannot go any further. Otherwise, a needle in the “key box” may not puncture the seal of the CO₂ cartridge and Hit-Air may not be activated properly.
- Do not reuse the gas cartridge once used. Change it to a new one. The seal at the bottom of an used cartridge is pierced with a hole.
