

Be sure to read this User's Guide carefully before using the Hit-Air (airbag system) for proper use and safety, please keep it in the place you can reach anytime (e.g. in the motorcycle).

The marks used in this User's Guide denote as follows.

WARNING!

This mark denotes that if the "WARNING" is ignored, it could result in death or a serious injury to the user of this product.

WARNING ! 1. The Hit-Air is to be used for the rider's safety when riding a motorcycle and not for any other purpose.

WARNING ! 2. The Hit-Air of the right size is to be worn as an outerwear on the upper half of the body.

WARNING ! 3. Use the Hit-Air CO₂ gas cartridge of the same size and contents as before when replacing and confirm that there are no holes or tears in its seal.

WARNING ! 4. Do not take any parts of the Hit-Air apart.

CAUTION ! 5. Remove sharp or pointed objects such as pins or pens from the Hit-Air or from the underwear before wearing. They may damage the air cushion before or at the time of the activation and prevent the function of the Hit-Air.

CAUTION ! 6. Keep open flames and cigarettes away from the Hit-Air as holes or tears caused by them will prevent its function. Keep and use at temperatures below 40°C/104°F as the Hit-Air CO₂ gas cartridge may burst at a high temperature.

CAUTION ! 7. Disconnect the Hit-Air from the "coiled wire" at the "one-touch release (connector)" before dismounting the motorcycle. Otherwise, it may cause an accidental activation.

CAUTION ! 8. Inspect the Hit-Air to determine if there is any damage prior to wearing. If there is any damage, consult with an authorized dealer.

Zip and close the key box cover

Outline of re-assembling by yourself

No Damage

Damage

How to Re-assemble

If it cannot be re-assembled and it is damaged by the previous activation, it can be reused if it is done properly; it may not work.

We recommend to take the Hit-Air to an authorized dealer for a maintenance check and re-assembling after activation. It can be assembled in accordance with the following procedure, but unless it is done properly, it may not work.

Re-assemble by yourself by using wrench (both of which are supplied with the setting bolt and the hexagon socket bolt) and the coiled wire.

Replace parts such as gas seal, gasket and reuse.

Find out whether it is reusable by an authorized dealer.

Replace the gas cartridge.

Re-assemble by yourself by using wrench (both of which are supplied with the setting bolt and the hexagon socket bolt) and the coiled wire.

7-1 How to Re-assemble

7-2 Re-assembling Key Box

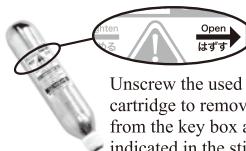

6. Unscrew the setting bolt and take it away from the bottom of the key box. (Photo 6)

7. Lift the red guard to the upper position. (Photo 7)

CAUTION !

If the system activates while the red guard is in the "locked" (down) position, it may cause the system malfunction or damage to the Hit-Air.

8. Unscrew the used gas cartridge by turning anticlockwise. (Photo 8)

Unscrew the used cartridge to remove from the key box as indicated in the sticker attached to the cartridge.

CAUTION !

After unscrewing the used cartridge, please check if the needle inside of the key box is not damaged. If there is any damage on the needle, please consult with an authorized dealer.

The airbag doesn't work nor inflate if the needle is damaged or deformed.

P.T.O.

obstacles in between.

(*) The "activation distance" is defined as the length of the coiled wire including standings on pegs.

The key ball requires considerable strength to be pulled out and will not be released easily because of the elastic nature of the coiled wire, thus the Hit-Air will not inflate under normal circumstances.

The Hit-Air will pull the rider's body away from the shock of impact and reduce the risk of injury which the rider may strike after falling off or being thrown off the motorcycle.

Hit-air ball reduces the gas cartridge to come between the rider's body and objects against immediately.

This causes the gas cartridge to release the CO₂ gas into the key box (see 4-3 P12).

If it will be activated at the moment the key ball is pulled out from the key box, it will be activated immediately after a distance from the rider to the motorcycle.

It will be activated/inflated immediately when the rider falls off or drops off the motorcycle.

The Hit-Air (Shock-buffering Protection System) is to be worn as an outerwear when riding a motorcycle.

The Hit-Air will be activated/inflated immediately after a distance from the rider to the motorcycle.
